

Telephone Protection Hood Type 404 / Synthetic material

**Especially suitable for use
in noisy work environments**

- ▶ Sound absorbt up to 25 dB(A)
- ▶ Weatherproof
- ▶ RAL coatings on request
- ▶ Synthetics

Application

The telephone protection hood is an excellent aid to cut out extraneous noise and improve audibility in noisy surroundings when open telephones have to be installed for economic reasons.

The special shape of the hood and its inner lining of sound-absorbing material optimally reduces noise in the area of the telephone. Eavesdropping is also made difficult. The best acoustic effect is achieved when the protection hood is mounted with its back facing the noise source or loudest noise source (see directional diagram of sound-level reduction).

Design GRP

The protection hood is made of synthetic material and lined on the inside with sound-absorbing mineral fibre boards behind a perforated plate cover.

Outdoor Telephoning

Soundproofing at a cable route

Technical specifications

Housing	Synthetic material, material dyed in (red, yellow)
Paint	Powder coated e.g. orange Special coating on request
Dimension	As per drawing
Weight	Head 30 kg Console 17 kg
Colour Console	Yellow
Sound absorbt	Up to 25 dB(A)

Material outsides:

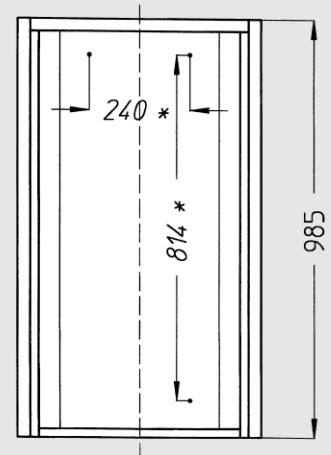

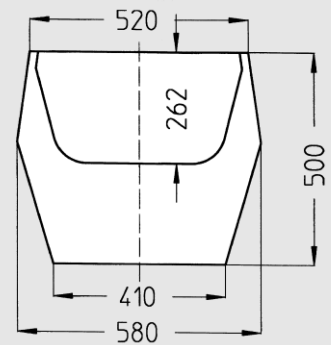

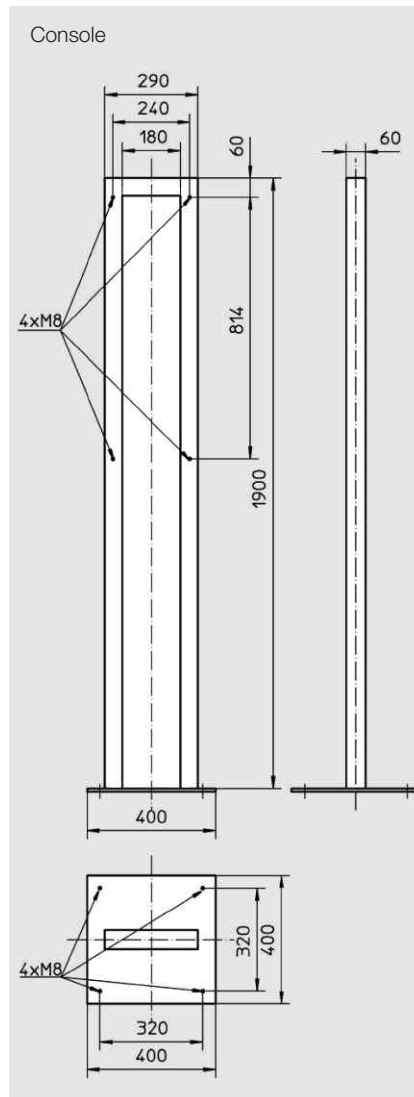

Roughly PVC
UV and weather-solid
High impact resistant as
DIN ISO 11833-1
Resistant against many
aciditys and lyes
Flame resistant as
DIN ISO 4102
Deep drawing quality

Material inside:

Perforated plate metal ST37-2

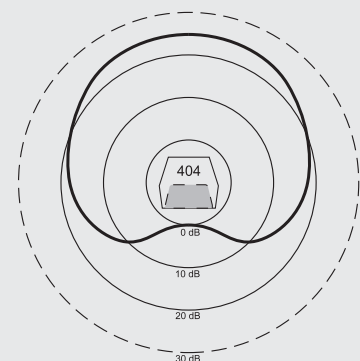

Material insulation:

Rockwool RAF-SE
