

DAEWOO

Service Manual

Side by Side Refrigerator

MODEL : FRS-2431

✓ **Caution :**

In this Manual, some parts can be changed for improving, their performance without notice in the parts list. So, if you need the latest parts information, please refer to PPL(Parts Price List) in Service Information Center (<http://svc.dwe.co.kr>).

❖ SAFETY AND PRECAUTIONS ❖

- 1) For starters, be sure to check any chances of the leakage of electricity
- 2) You could handle a part in the vicinity of electricity after unplugging
- 3) You should put on rubber gloves to prevent an electric shock on operation test
- 4) Make sure the rated current, voltage, capacity before using an instrument
- 5) Keep your wet hands away from the metal goods in the freezer compartment not to be frostbitten
- 6) Be careful not to let water to permeate the electric part in the machine room
- 7) with the door open during your working, you might be damaged by that door
- 8) You should give a tilt to the refrigerator for your safe after removing the breakable goods inside the refrigerator
- 9) You'd better use cotton gloves if you fix it up around the evaporator

INPUT	Control Object
1. FREEZER SET. button 2. SUPER FREEZER. button 3. F-sensor	1. COMP 2. F-FAN
CONTENTS	
REMARKS	
<p>1. Temperature modes change by pushing the button.</p> <p style="text-align: center;"> Low → Low-Mid → Mid → Mid-High → High </p> <p>2. Comp. and F-fan are controlled by ON / OFF point of each mode.</p> <p>3. FC [ON / OFF] DIFF : 2 °C (Freezer middle OFF point : -20.0 °C) (If RT↑ 13°C, F-S OFF point is 2 °C UP. Freezer Middle OFF point : -18 °C)</p> <p>4. FC [Low → (Low-Mid) → Mid → (Mid-High)] DIFF : 2 degrees respectively *([(Mid-High) → High] DIFF : 4 degrees)</p> <p>5. Control point of each mode</p>	

OPERATION AND FUCTIONS

CONTENTS	REMARKS
<p>6. SUPER FREEZER. (Quick Freezing)</p> <p>1) Comp. and F-fan are ON (about 150 minutes) regardless of F-sensor. 2) F-fan runs at 14V for the first 90 min., then at 12V for the rest time.</p> <p style="text-align: center;">SUPER FRZ. start F-fan RPM change point Normal operation</p>	<p>* <u>ON/OFF DIFF. :</u> fixed by MICOM</p> <p>* <u>STEP DIFF. :</u> fixed by MICOM</p> <p>* <u>Comp. and C-fan :</u> linked</p>

Temperature Control of Refrigerator Compartment (RC)

INPUT	Control Object
1. REFRIGERATOR SET. button 2. R-sensor	1. COMP 2. R-FAN
CONTENTS	REMARKS
<p>1. Temperature modes change by pushing the button.</p> <p>Low → Low-Mid → Mid → Mid-High → High</p> <p>2. R-fan are controlled by ON / OFF point of each mode.</p> <p>3. RC [ON / OFF] DIFF : 0.5°C (RC middle OFF point : 0.7°C) (If $RT \leq 13^\circ\text{C}$, R-S OFF point is 2°C UP. Refrigerator Middle OFF point : 2.7°C)</p> <p>4. RC [Low→(Low-Mid)→Mid →(Mid-High)] DIFF : 1 degree respectively</p> <p>5. Prevention of weak/poor-refrigeration</p> <p>1) When weak refrigeration is sensed, comp. is ON regardless of F-sensor. 2) When R-sensor reaches R-fan OFF point, comp. is controlled by F-sensor and R-fan turns OFF. 3) Sensing point of weak refrigeration : R-sensor OFF point of each mode + 7°C 4) Termination point : Same as R-sensor OFF point of each mode</p>	<p>* <u>ON/OFF Diff. :</u> fixed by MICOM</p> <p>* <u>STEP DIFF. :</u> fixed by MICOM</p>

CONTENTS	REMARKS
<p>6. Control point of each mode</p>  <p>7. Super refrigeration proceeds for 40 minutes. * Example of temperature change (Refrigerator ; Low (normal) -> Super refrigeration)</p>  <ol style="list-style-type: none"> 1) R-fan and comp. are ON until R-sensor reaches to over-refrigeration OFF point (-7°C). 2) After reaching to the point, it goes on with HIGH mode until the end of Super refrigeration. It returns to normal after Quick refrigeration of 40 minutes. 	

OPERATION AND FUCTIONS

INPUT	Control Object	
1. SLEEP button	1. COMP 2. R-FAN 3. F-FAN 4. CUSTOM-LCD	
CONTENTS		REMARKS
<p>1. This mode starts with a push of SLEEP button.</p> <p>2. Conditions to start Sleep mode</p> <ul style="list-style-type: none"> ① F-sensor $\leq -13^{\circ}\text{C}$ ② Unless it is a restart within 40 minutes after the end of previous Sleep mode ③ F-sensor error ④ Door switch error ⑤ Defrosting (Heater defrosting, pause, Fan delay) ⑥ If the above conditions of ① ~ ⑤ are all satisfied, the sleep mode starts. <p>3. Control of electrical parts</p> <ul style="list-style-type: none"> 1) Mode 1 Once Sleep mode starts, all the electrical parts (COMP, F-FAN, R-FAN) turn OFF. ("ON" letters of SLEEP on LCD is display.) 2) Mode 2 It operates with Silent mode and ON letters of SLEEP on LCD is displayed on.) <p>4. Termination of Sleep mode</p> <ul style="list-style-type: none"> 1) MODE 1 <ul style="list-style-type: none"> ① F-sensor $\geq -9^{\circ}\text{C}$ ② In case of F-sensor error ③ When other button is pushed during this mode ④ Total F/R door open time exceeds 30 seconds during the mode ⑤ If Sleep mode is terminated by ①, ② and ③, F/R-fan delay for 5 minutes and restart of this mode is prevented for 40minutes. ⑥ It it exceeds time limit of 130 minute, Mode1 is terminated and Mode2 starts. 2) MODE 2 Sleep mode is terminated 12 hours after the first start. (Speed mode and defrosting operate in normal way.) <p>5. After Sleep mode stops all the electrical parts return to normal operation and Sleep icon changes from "ON" to "OFF".</p> <p>6. If Sleep mode starts during PRECOOL, it goes on again after the Sleep mode is terminated.</p> <p>7. If Sleep mode starts during Super FRZ., Super REF., it returns to previous set modeafter the Sleep mode is terminated.</p>		

SILENT (Silence Mode)

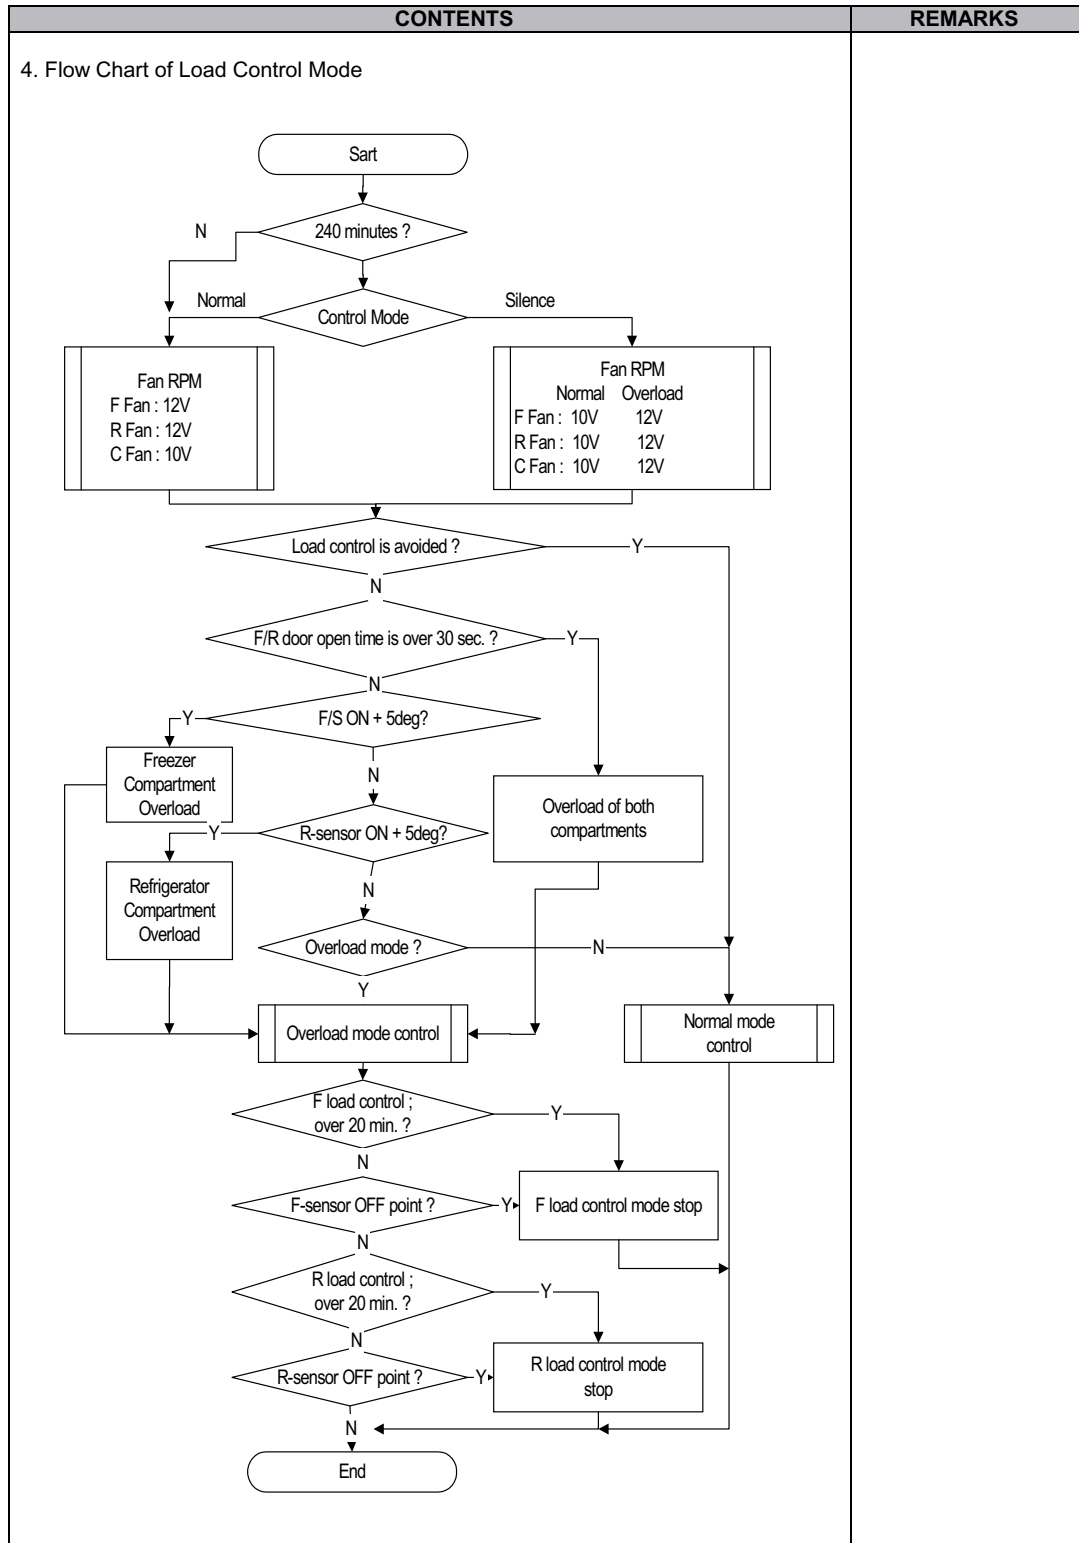

INPUT		Control Object																
1. CDS SENSOR		5. COMP 6. R-FAN 7. F-FAN 8. CUSTOM-LCD																
CONTENTS				REMARKS														
<p>1. Purpose of Silence mode To reduce refrigerator noise at night by decreasing fan RPM to a minimum degree</p> <p>2. Condition to start 1) The optical or light sensor in top middle of control panel senses surround light and Silence mode starts if the amount of light sensed is below the standard value for more than 1 minute. (The mode does not start for initial 240 minutes to prevent down of cooling performance.) ① Standard value to decide "night" : below 5~7 Lux (optical sensor surface) ② Standard value to decide "daytime" : above 4~16 Lux (optical sensor surface)</p> <p>3. Control Method</p> <table border="1"> <thead> <tr> <th colspan="2">Control Mode</th> <th>F-FAN</th> <th>R-FAN</th> <th>C-FAN</th> </tr> </thead> <tbody> <tr> <td rowspan="2">Silence</td> <td>Normal</td> <td>10V</td> <td>10V</td> <td>10V</td> </tr> <tr> <td>Load Control</td> <td>12V</td> <td>12V</td> <td>10V</td> </tr> </tbody> </table> <p>4. Termination Condition The mode stops if lux value is above the standard for more than 1 minute.</p>				Control Mode		F-FAN	R-FAN	C-FAN	Silence	Normal	10V	10V	10V	Load Control	12V	12V	10V	
Control Mode		F-FAN	R-FAN	C-FAN														
Silence	Normal	10V	10V	10V														
	Load Control	12V	12V	10V														

Control of Each Mode

INPUT		Control Object		
1. CDS SENSOR 2. R SENSOR 3. F SENSOR		1. F-FAN (14V, 12V, 10V)		
CONTENTS				REMARKS
<p>Control of Silence mode : operation mode when the optical sensor feels that it is night</p> <p>Normal control : daytime operation mode (Refrigerator noise is relatively low at daytime.)</p> <p>Load control : operation mode when inside temperature goes up due to an increase of load (foods) or frequent door openings</p>				

CONTENTS				REMARKS
1. Fan voltage of each control mode				
Control Mode		F-FAN	R-FAN	C-FAN
Normal		12V	12V	10V
Load Control	Normal	14V	14V	
	Silence	12V	12V	
Silence	Normal	10V	10V	
Sleep Mode2	Normal	10V	10V	
	Load control	12V	12V	
2. Control against (under) load (Load Control)				
1) Purpose : To restore F/R-temperature which has risen by load (much foods in or frequent door openings) as soon as possible				
2) Display : "SPEED" lights until the mode and speed icons flicker.				
3) Conditions to start (from both Normal and Silence)				
① F or R door open time exceeds 30 seconds at a time Freezer and Refrigerator load control starts respectively.				
② Over [F-sensor On Point + 5 degree] → F load control				
③ Over [R-sensor On Point + 5 degree] → R load control				
4) Conditions to avoid load control				
① Initial operation (right after pow				
② Just after Pre-cool, Heater defrosting, Pause, Defrosting cycle (After door opening, the load control enters if the condition complies with.) (During Sleep Mode1, load control isn t active.)				
5) Control Method				
5-1) Control mode by F/R-door open time (over 30 seconds) F/R-fan works by 14V respectively.				
5-2) Control mode by [F-sensor On Point + 5 degree] F-fan works by 14V.				
5-3) Control mode by [R-sensor On Point + 5 degree] R-fan works by 14V. C-fan works by 10V as normal.				
6) Conditions to stop				
① The mode works for 20 minutes. (If another condition happens at the end of the mode, it starts again.)				
② When it reaches to [F-sensor Off point], F-fan load control mode stops.				
③ When it reaches to [R-sensor Off point], R-fan load control mode stops.				

CONTENTS	REMARKS
<p>3. Control Time Chart of Each Mode</p> <p>1) Start & stop of load control mode (Normal Control)</p> <p>2) Start & stop of load control mode (Silence Control)</p> <p>3) Start & stop of load control mode (Normal defrosting control)</p>	

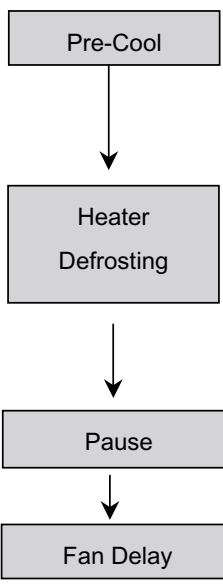

Defrosting Cycle

INPUT	Control Object	
1. Total comp. work time 2. Comp. work rate 3. RT temperature 4. Total door open time	1. Defrosting Mode	
CONTENTS		REMARKS
<p>1. Conditions to start defrosting cycle</p> <ol style="list-style-type: none"> 1) Total comp. work time : 6, 8, 10 hours 2) Comp. work rate (by the 2 hours) : over 65% 3) Total door open time : 3 minutes (Any door - F or R - open time is over 3 minutes.) 4) Total time of [comp. ON + comp. OFF] : 60 hours 5) Ambient temperature over 35°C 6) Any error mode : R1, F1, D1, F3, RT/S, Door-switch <p>2. Conditions to start defrosting mode</p> <ol style="list-style-type: none"> 1) The mode starts in the following conditions ; <ol style="list-style-type: none"> ① Any error happens when total comp. work time is 6 or 8 or 10 hours. ② Comp. work rate by the 2 hours is over 65%. ③ Total door open time is over 3 minutes. (Any door - F or R - open time is over 3 minutes.) Ambient temperature is over 35°C. 2) Defrosting mode starts unconditionally as long as total comp. work time is 10 hours, even if the above conditions(①~④) are not satisfied. 3) Defrosting mode starts immediately as long as total time of [comp. ON + comp. OFF] is over 60 hours, even if the above 1) and 2) conditions are not satisfied. 		

CONTENTS	REMARKS

(Generally, Water is supplied about 5.5s.) ③ Termination : Exchang Flow-Sensor. <p>12) "Eg" Error</p> <ul style="list-style-type: none"> ① Cause : I-Sensor temp(5M after Water supply) dosen t get high. ② Control : Normal control ③ Termination : Normal <p>13) Dispenser S/W Error</p> <ul style="list-style-type: none"> Cause : When it senses 1M continuously. Control : Stop Dispenser & Crusher function. Display : Relative ICON BOX is "OFF". Termination : Normal <p>14) Malfunction of Ice Drop Motor</p> <ul style="list-style-type: none"> ① Cause : Malfunction of Ice Drop Motor. [Check the Motor by pushing Test S/W.] ② Termination : Exchange Motor <p>15) "Eu" Error</p> <ul style="list-style-type: none"> ① Cause : Fully TM position is Error ② Control : When dropping the Ice, the motor just rotates 90 degree. ③ Termination : Fully sensor is normal. <p>16) "EA" Error</p> <ul style="list-style-type: none"> ① Cause : When sensing Ice dropping 3 times with level sensor SW Error. ② Control : Pause Ice Maker. ③ Termination : With level sensor SW is normal, Reset the Power or Push TEST S/W. <p>* When all ERROR CODE is normal, the Refrigerator reset.</p>	

Forced Defrosting

INPUT	Control Object
1. "FREEZER SET." Button 2. "REFRIGERATOR SET." button 3. "LOCK" button	Defrosting Mode
CONTENTS	
1. How to start Set "LOCK ON" first, then push "REFRIGERAOTR SET." button 5 times while pushing "FREEZER SET." button simultaneously. 2. How to proceed 1) Delete Pre-cool mode. (Others are same as normal defrosting.) 2) Heater is ON regardless of D-sensor temp. at first 30 seconds. (Check of defrosting current)	REMARKS

6-11. Initial Defrosting

INPUT	Control Object
D-sensor Initial or first power input (power plugin)	Defrosting Mode
CONTENTS	
If D-sensor temp. $\leq 3.5^{\circ}\text{C}$, defrosting mode starts from Pre-cool at first power input.	REMARKS
	Comp. is delayed for 6 min. at the initial defrosting.

6-12. Buzzer or Alarm

INPUT	Control Object
F-PCB buttons Door Switch Initial Power Input	BUZZER
CONTENTS	
1. Buzzer sounds if any button of F-PCB is pushed. 2. Buzzer sounds 3 times 3 minutes after initial power input. 3. Buzzer sounds for 1 second in case of A/S forced defrosting, short (pull-down) operation, explanation mode. 4. If door is open, buzzer sounds continually 3 times for 5 seconds. (Door open alarm)	REMARKS

LCD Background Light

INPUT	Control Object
F-PCB buttons Door Switch Initial Power Input	LCD BACK LIGHT

OPERATION AND FUCTIONS

CONTENTS	REMARKS
1. Conditions to turn on LCD Light 1) Power input (plugin) 2) When any button on the panel is pushed, first the back light turns on, then button control is done. 3) When F/R door is open, the light turns on. 2. Conditions to turn off the light 1) The back light turns off 10 seconds after F/R door is closed 2) 1 minute after button control	

Explanation After Delivery

INPUT	Control Object
"FREEZER SET." button "REFRIGERATOR SET." button Power Cord	Electrical components and LCD
CONTENTS	REMARKS
1. Start Push "REFRIGERATOR SET." button for 3 seconds within 10 seconds just after power input. 2. Control 1) Electrical components are OFF for 3 hours. 2) Display operates in normal way.	

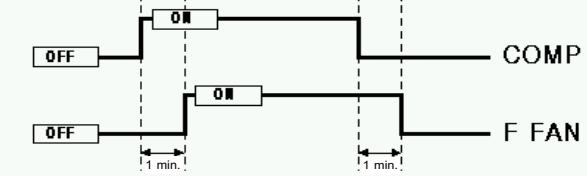

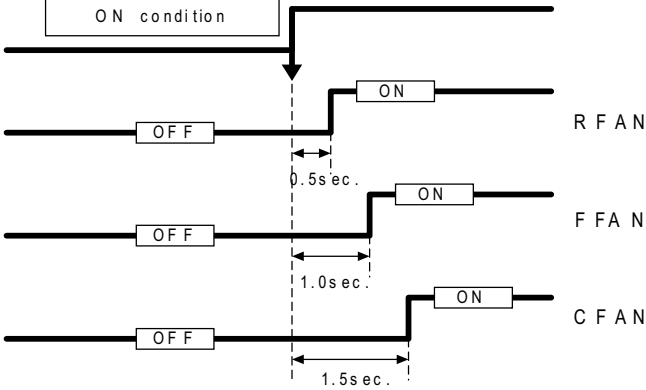

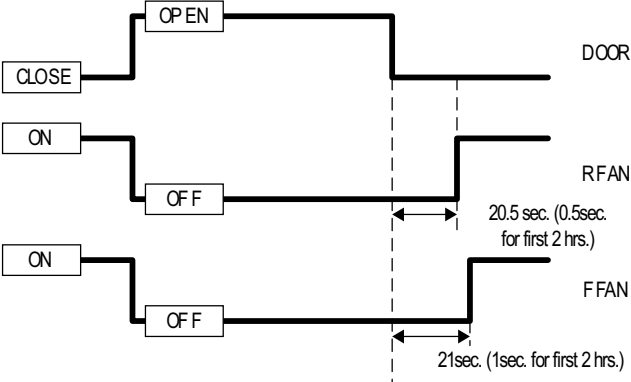

Prevention of Compressor Restart

INPUT	Control Object
None Comp.	
CONTENTS	REMARKS
Comp. does not start again for 6 minutes though F-sensor is ON.	6min. delay

Back Up Function

INPUT	Control Object
None	
CONTENTS	REMARKS
1. Filter Exchange Information : Record as a realtime from the point of Power Input. 2.P FACTOR (Information about Ice Maker) 3.Ice Maker Lock	

Delay Function of Electric Components

INPUT	Control Object	
COMP ON/OFF	COMP F-FAN	
CONTENTS		REMARKS
<p>1) F-fan delay by comp. ON/OFF F-fan is ON/OFF 1 minute after comp. is ON/OFF.</p> 		
<p>2) F an Delay and Priority</p> 		
<p>3) F /R-fan delay by door open/close for easy door opening. Inspection : checkup door opening 2 hours after initial start. First R is ON, 1 second later F is ON to protect DC fan against over current at initial start.</p> 		

OPERATION AND FUCTIONS

Home Bar (Refreshment Center) Heater

INPUT	Control Object
None COMP	
CONTENTS	REMARKS
It is linked with comp.	

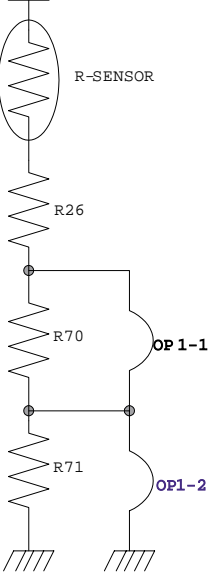

Control of Interior Lights

INPUT	Control Object
Refrigerator Door Freezer Door Home-Bar Door (Refreshment Center)	COMP
CONTENTS	REMARKS
<p>1) Control of Refrigerator Compartment Lights R lights turn ON/OFF by R-door switch (ON/OFF). 10 minutes after sensing door open, the lights turn off automatically though door close is not sensed.</p> <p>2) Control of Freezer Compartment Lights F lights turn ON/OFF by F-door switch (ON/OFF). 10 minutes after sensing door open, the lights turn off automatically though door close is not sensed.</p> <p>3) R-lights ON/OFF by Home-Bar door opening R-lights turn ON for 1 minute after sensing HOME-BAR switch open. (If the switch is pushed again within 1 minute, the light turns on another 1 minute.)</p> <p>4) DISPENSER LAMP CONTROL DISPENSER LAMP turns ON/OFF by DISPENSER SW. Dispenser Lamp turns ON for 5 seconds after sensing switch close.</p>	

Demonstration Function

INPUT	Control Object
"LOCK" button "REFRIGERATOR SET." button "SLEEP" button	COMP F-FAN R-FAN
CONTENTS	REMARKS
<p>1. Start</p> <p>1) Set "LOCK ON" first.</p> <p>2) Push "SLEEP" button 5 times while pushing "REF SET." button simultaneously.</p> <p>2. Control</p> <p>1) All other electrical components are OFF except for F-fan / R-fan.</p> <p>2) Fan Control DOOR OPEN → FAN ON / DOOR CLOSE → FAN OFF</p> <p>3) Display : Normal mode (3.8sec.) → SPEED(3sec.) → Silent mode(3sec.) → Sleep mode (3sec.)</p> <p>3. Stop or Termination</p> <p>1) During Demo mode push "SLEEP" button 5 times while pushing "REF SET." button simultaneously.</p> <p>2) Power in again.</p>	

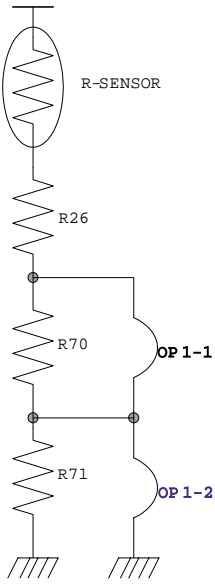

Regulation of R-sensor OFF Point

INPUT	Control Object
J18, 22 on Main PCB	Resistance of R-sensor Mid OFF Point
CONTENTS	
<p>Regulation of R-sensor OFF point (1.5degree DOWN) In case refrigeration of refrigerator is weak or insufficient, take the following action.</p>  <p>R26 : R-SENSOR standard resistance in normal mode (31.4K) R70 : In case of weak ref., cut J18 to down the standard resistance by 1.5deg(2K) R71 : In case of weak ref., cut J22 to down the standard resistance by 1.5deg(2K)</p> <p>R26 = Mid OFF point R26 + R70 = Mid OFF point - 1.5 deg R26 + R70 + R71 = Mid OFF point - 3.0 deg</p>

Sensors

Circuit Diagram

Fncion of Each Sensor

[F-sensor]

- 1) It senses the temperature of freezer compartment and controls Comp., F-fan ON / OFF.
- 2) How it works ;

Working Point	Low ON	Mid OFF	High OFF
Working Temp.	-11.0°C	-20.0°C	- 26.0°C
Resistance	14.74k Ω	22.33k Ω	30.92k Ω
Sensing Voltage	\approx 3.50 V	\approx 3.00 V	\approx 2.14 V

[D-sensor]

It senses return point of defrosting heater.

Working Point	Return point of defrosting heater
Working Temp.	10°C
Resistance	19.53k Ω
Sensing Voltage	\approx 3.1 V

[R-sensor]

- 1) It senses the temperature of refrigerator compartment and controls R-fan ON / OFF.
- 2) How it works ;

Working Point	Low ON	Mid OFF	High OFF
Working Temp.	2.65°C	0.3°C	-1.7°C
Resistance	26.88k Ω	29.34k Ω	32.00k Ω
Sensing Voltage	\approx 2.90V	\approx 2.81V	\approx 2.74V

OPERATION AND FUCTIONS

* In case refrigeration of refrigerator compartment is poor or insufficient though comp. and R-fan operate in normal way ;

- 1) Cut J18 on M-PCB, then temp. is lowered -2 °C than [Mid OFF point].
- 2) In addition to 1) action, cut J22 on M-PCB, then the temp. is lowered -1°C more.

Front PCB

INSTALLATION GUIDE

Installation Preparation

● Check if the refrigerator can pass a doorway or enter a door first. ●

	Dimensions(including Door Handles)
FRS-20****	(Width*Depth*Height) 928mm × 816mm × 1808mm
FRS-24****	(Width*Depth*Height) 928mm × 896mm × 1808mm

● Find a suitable place to install ●

※Sufficient space from refrigerator back to the wall for free air ventilation

※Avoid direct sunlight.

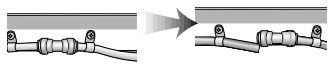

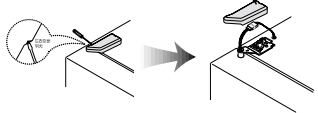

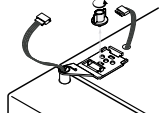

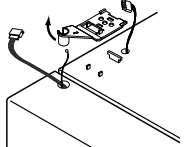

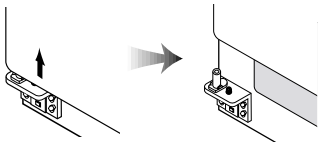

●Once the installation place is ready follow the installation instructions.
If surround temperature of refrigerator is low (below 5 °C), foods can be frozen or the refrigerator can work in abnormal way.

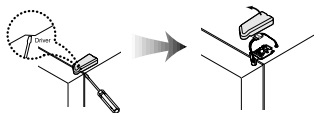

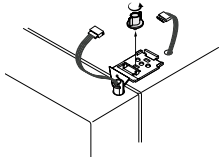

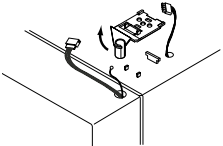

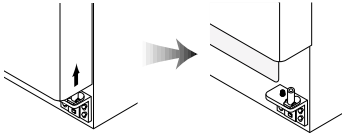

If the refrigerator can not enter the door, follow these steps.

● Removing Freezer Door ●

※Remove front bottom cover first, if it is attached.

<p>1 Remove the bottom cover first. Pull out the left collar of the coupling first, then hold the coupling and pull out the left water tube.</p> 	<p>2 Unscrew top hinge cover with a screw driver. Insert a thin screw driver into the side groove of the cover to remove.</p> 	<p>3 Turn top hinge fastener counterclockwise 3~4 times. Disconnect the harness wires.</p> 
<p>4 Lift up the front of hinge to remove. (After the hinge is removed the door can fall down forward. Be careful !)</p> 	<p>5 Be careful not to damage the water line when removing the door.</p> 	

● Removing Refrigerator Door ●

<p>1 Unscrew top hinge cover with a screw driver. Insert a thin screw driver into the side groove of the cover to remove.</p> 	<p>2 Turn top hinge fastener counterclockwise 3~4 times. Disconnect harness wires.</p> 	<p>3 Lift up the front of hinge to remove. (After the hinge is removed the door can fall down forward. Be careful !)</p> 
<p>4 Lift the door straight up to remove.</p> 		

How to install Water Line

- The water pressure should be 3kgf/cm² or more to run the automatic icemaker .
 ※ Checkup your tap water pressure ; if a cup of 180cc is full within 10 seconds, the pressure is OK.
- When installing the water tubes, ensure they are not close to any hot surfaces.
- The water filter only " filters " water ; it does not eliminate any bacteria or microbes.
- If the water pressure is not so high to run the icemaker , call the local plumber to get an additional water pressure pump.
- The filter life depends on the amount of use. We recommend you replace the filter at least once every 6months.
 ※ When attaching the filter, place it for easy access (removing & replacing)
- After installation of refrigerator and water line system, select [WATER] on your control panel and press it for 2~3 minutes to supply water into the water tank and dispense water.
- Use sealing tape to every connection of pipes/tubes to ensure there is no water leak.
- The water tube should be connected to the cold water line.

WATER SUPPLY KIT

※ Check the parts below for installing water supply.
 Some other necessary parts are available at your local service agents.

Installation Procedure

1. Join [Connector A], [Connector B] and [Water Valve] to the tap water lines.

- Switch off the main water line(valve).
- Connect [Water Valve] and [Connector A].
- Join [Connector A], [Connector B] to the tap water lines
 ※ Use only [Connector A + Water Valve] in case there's only one tap water line.
 ※ Apply the sealing tape to all the joints as the figure shows.
 ※ If the connectors(valves) do not fit the existing water line, call your service agent for additional guidance and action.

Achtung The water valve should be connected to the cold water line, otherwise there can be a problem of cold water supply."

2. Connect the Water Tube to the Water Valve.

- Insert the Nut to the Water tube.
- Insert the Tube to the Valve as the figure shows.
- Fasten the nut to join firmly.

3. Get ready to install the Water Filter

- 1) Measure an approximate distance between the filter and the Water Tube and cut the tube off filter vertically.
- 2) Connect the tubes to the filter as the figure shows.

Leave a sufficient distance when cutting the tubes.

4. Remove any substances in the filter.

- 1) Open the main tap water valve and check if water comes out of the Water Tube.
- 2) Check if the Water Valve is open in case water does not come out.
- 3) Leave the valve open until clean water is coming out.
 ※ Initial water may contain some substances out of filter (manufacturing process).

5. Attach the Filter Box

- 1) Screw and fasten the filter holder to the left/right side of the back of refrigerator.
 ※ In case the holder is not fastened well, remove the back paper of the tape on the filter holder and attach it."
- 2) Insert the filter box into the holder.

6. Connect the Water Tube to the refrigerator.

- 1) Remove the rear cover at the bottom back of the refrigerator.
- 2) Insert the fastening ring into the Water tube. (Be careful to follow the direction of the nut.)
- 3) Insert the Water Tube into the top of Water Valve, turn the nut clockwise to fasten it. (The Water valve is to the right of the motors.)
- 4) Check for any bent tubes or water leaks; if so, re-check installation procedure.
- 5) Replace the rear cover. (The Water Tube should be placed between the groove of the refrigerator back and motor cover.)

Set the tube upright as the figure shows.

7. Fasten the Water Tube.

- 1) Fasten the Water Tube with the [Fastener A].
- 2) Check if the tube is bent or squeezed. If so, set it right to prevent any water leak.

8. After installation of Water Supply System

- 1) Plug the refrigerator, press the [WATER] button on the control panel for 2~3 minutes to remove any air (bubble) in the pipes and drain out the initial water.
- 2) Check the water leak again through the water supply system (tubes, connectors and pipes) Rearrange the tubes again and do not move the refrigerator.

● Replacing Freezer Door ●

1 Insert the water tube into the hole of the bottom hinge pin first, then insert the bottom of freezer door into the bottom hinge pin.

2 Insert the bottom hole of freezer door straight to the bottom hinge pin.

3 Let the top of door close to the cabinet and insert the top hinge pin to the top hole of freezer door. (Insert the back of hinge to the groove of protrusion first, then front to the top hole of door.)

4 Turn the hinge fastener tightly to the end. Connect harness wirings and screw ground wire.

5 Insert the water tube far into the coupling.

● Replacing Refrigerator Door ●

1 Insert the bottom hole of refrigerator door straight to the bottom hinge pin

2 Let the top of door close to the cabinet and insert the top hinge pin to the top hole of freezer door (Insert the back of hinge to the groove of protrusion first, then front to the top hole of door.)

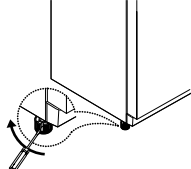

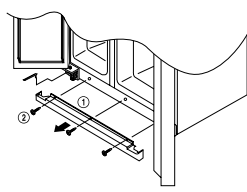

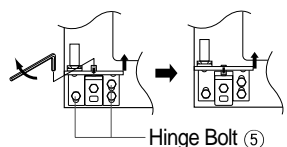

3 Turn the hinge fastener tightly to the end. Connect harness wirings and screw ground wire. Click and screw the top hinge cover.

Refrigerator Leveling & Door Adjustment(If needed.)

Refrigerator must be level in order to maintain optimal performance and desirable front appearance.
(If the floor beneath the refrigerator is uneven, freezer and refrigerator doors look unbalanced.)

● In case freezer door is lower than refrigerator door ... ●

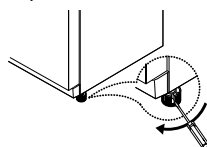

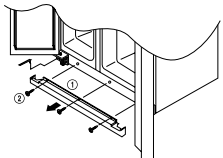

<p>1 Insert a screw driver (flat tip) into a groove of the left wheel (bottom of freezer) and turn it clockwise until the door is balanced. (clockwise to raise freezer door ; counterclockwise to lower) ※ Unless the freezer door is balanced by step 1, then follow the next steps.</p> 	<p>2 Open the doors, unscrew the front cover and remove, if it is attached.</p> 	<p>3 Loosen 3 hinge bolts(1 on the left + 2 on the right) a little. (Do not unfasten them completely.) Insert a hexagonal wrench into the groove of adjusting nut and turn clockwise until the door is level.</p> <p>4 Once the door is balanced, fasten the hinge bolts tightly and screw the front cover.</p>  <p>Hinge Bolt ⑤</p>
--	--	--

Caution

• The front of refrigerator needs to be higher just a little than the back for easy door closing, but if the wheel is raised too much for door balance, i.e. front of refrigerator is too higher than the back, it can be difficult to open the door.

● In case refrigerator door is lower than freezer door ... ●

<p>1 Insert a screw driver (flat tip) into a groove of the right wheel (bottom of refrigerator) and turn it clockwise until the door is balanced. (clockwise to raise refrigerator door ; counterclockwise to lower) ※ Unless the refrigerator door is balanced by step 1, then follow the next steps.</p> 	<p>2 Loosen 3 hinge bolts(2 on the left + 1 on the right) a little. (Do not unfasten them completely.) Insert a hexagonal wrench into the groove of adjusting nut and turn clockwise until the door is level.</p> 	<p>3 Once the door is balanced, fasten the hinge bolts tightly.</p>
---	--	--

Front Cover

After installation and/or door leveling, fasten front cover with screws.(Remove the screws on the front bottom panel first. Click and screw the cover)

Attaching of Water Filter Holder

Remove the back paper of the tape on the filter holder and attach the filter holder on a suitable place.
