#### VITICULTURAL INFO:

Extreme conditions, caused by climate changing were noted this year. Several days with snow, some times even in very low altitudes (200 m) as we had on January 10th. On February and March, we had higher temperatures than usual, situation that provoked a significant activity in the plants. During flowering (May), we had temperatures higher than 30º C, and almost no rain. The hot weather was the dominant condition during the following months. In June we had extremely high temperatures between the 10th and the 22nd. That was very important for the health of the vines/grapes. Very hot weather, extremely dry conditions have conditioned in a significant way the phenolic maturations, reason why we started September almost "asking" for rain! But in the end, we made the harvest on the dryer September of the last 22 years.
